BIG BAG STATION WITH FORKLIFT

FULL PRODUCT AUTOMATION

The big bag station with forklift ensures **fully automated big bag unloading**. The big bag is lifted **by the forklift**, then the product is unloaded in an automated and **safe** manner.

ADVANTAGES

RESISTANT AND SAFE VIBRATING CRADLE

Sturdy and safe structure: the big bag is hung to the frame, but it also rests on a sturdy metal structure.

DOOR FOR SAFE OPENING OF THE BIG BAG

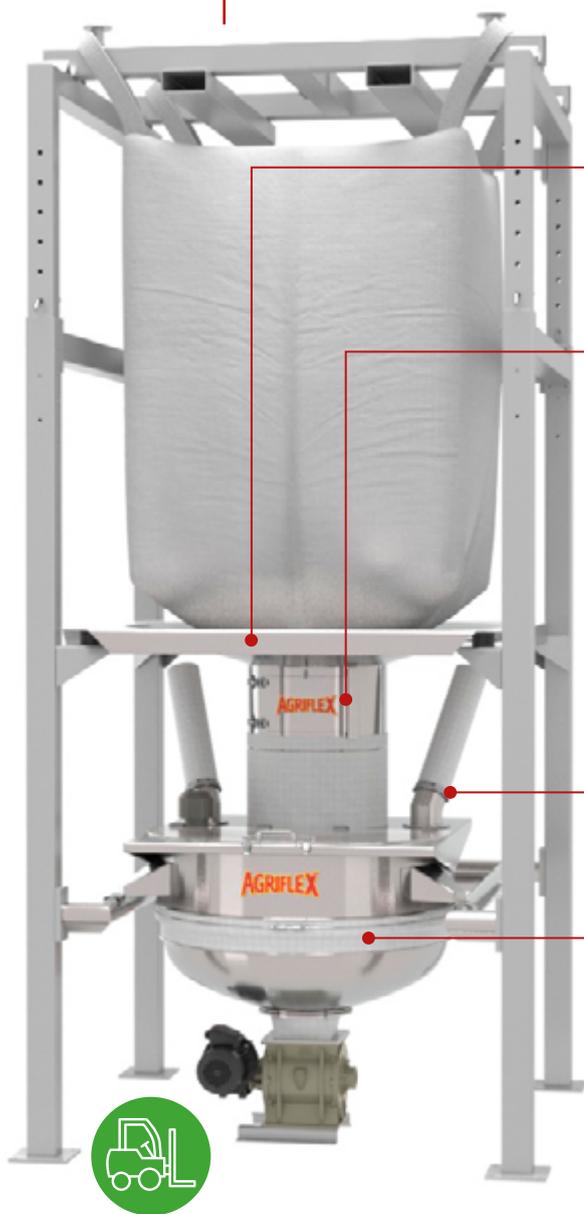

Specially designed to make it easier to untie or cut the big bag open. The operator can perform the operation in a safe manner. The product will be discharged in a closed environment with no risk of powder scattering.

DUSTPROOF VENT FILTER

BIG BAG EMPTYING UNIT AS PRODUCT BUFFER FOR CONTINUOUS OPERATION

It is possible to add a big bag emptier under the emptying station. It works as a storage and dosage unit, like a silo, because it makes it possible to have some product available at all times, even during the big bag replacement phase.

All our products comply with:

All regulations for specific applications (ATEX, food regulations, safety, seismic codes etc.)

BIG BAG STATION WITH HOIST

HOIST-FITTED STATION NO NEED FOR FORKLIFT

If the product unloading station is not accessible by a forklift, the big bag station with hoist can work autonomously. Once the bag is positioned using a pallet truck, the hoist lifts it up from zero to a height of 150 cm and brings it to the right position onto the vibrating cradle for emptying. Even an unskilled operator can use the hoist and work in safety conditions.

ADVANTAGES

HOIST: TO LIFT AND MOVE THE BIG BAG AUTONOMOUSLY

The hoist makes it possible to lift the big bag without a forklift. Even unskilled operators can use it.

RESISTANT AND SAFE VIBRATING CRADLE

Sturdy and safe structure: the big bag hangs from the frame, but it also rests on a sturdy metal cradle.

DOOR FOR SAFE OPENING OF THE BIG BAG

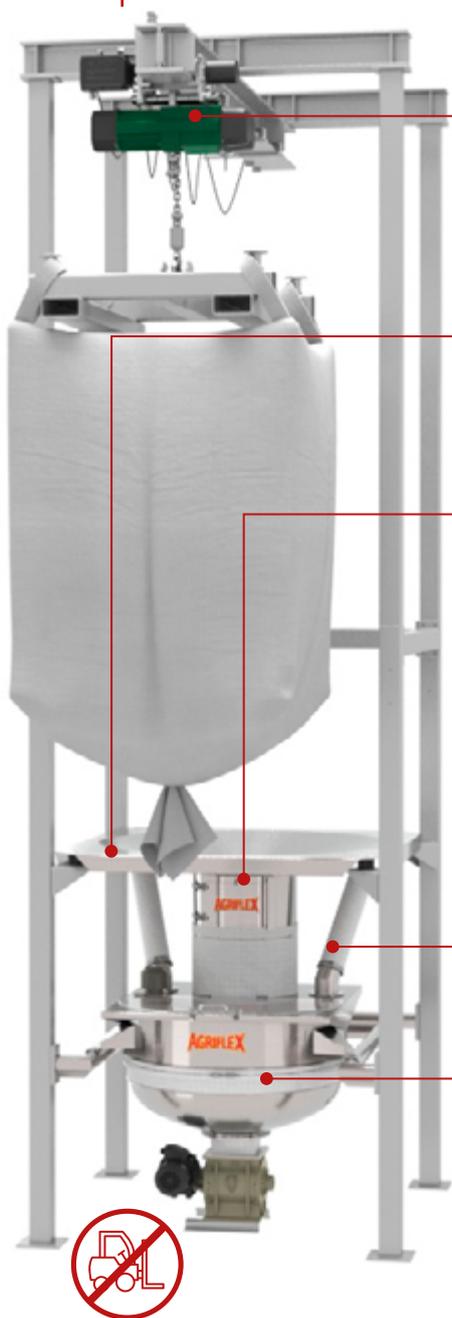

Specially designed to make it easier to untie or cut the big bag open. The operator can perform the operation in a safe manner. The product will be discharged in a closed environment with no risk of powder scattering.
